Are We Actually Protected? Cybersecurity Questions Every I/DD Provider Leader Should Ask

The Institute is hosting **Are We Actually Protected? Cybersecurity Questions Every I/DD Provider Leader Should Ask**, a webinar presented by No Quarter Consulting.

Tuesday, December 8th from 1-2pm via webinar

Register HERE.

For leaders responsible for sensitive information and services people depend on, it can be difficult to know whether policies, internal practices, and technology are providing the protection they expect. This session will give members practical questions to ask their teams and providers, along with guidance on what a meaningful answer should include.

We will cover:

- **Policies in practice**: Setting clear expectations for personal devices, sensitive information, AI tools, and reporting suspicious activity, and checking that staff understand them.
- **Protection beyond the invoice**: Verifying that security tools and services are implemented, monitored, and covering the organization.
- **Readiness for an incident**: Knowing who makes decisions, who gets called, and whether backups can restore critical information and operations.
- **Clear accountability**: Understanding what leadership, internal IT, and outside providers each own, and what to review with the cyber insurance broker

Who should attend?
CEOs, CFOs, COOs, and IT staff

Attendees will leave with a short leadership checklist they can use with their own teams and providers.
